#### 1 Finding replicated Web collections

99%

Junghoo Cho , Narayanan Shivakumar , Hector Garcia-Molina

**ACM SIGMOD Record , Proceedings of the 2000 ACM SIGMOD international conference on Management of data** May 2000

Volume 29 Issue 2

Many web documents (such as JAVA FAQs) are being replicated on the Internet. Often entire document collections (such as hyperlinked Linux manuals) are being replicated many times. In this paper, we make the case for identifying replicated documents and collections to improve web crawlers, archivers, and ranking functions used in search engines. The paper describes how to efficiently identify replicated documents and hyperlinked document collections. The challenge is to identify these replicas ...

#### 3 Synchronizing a database to improve freshness

94%

Junghoo Cho , Hector Garcia-Molina

**ACM SIGMOD Record , Proceedings of the 2000 ACM SIGMOD international conference on Management of data** May 2000

Volume 29 Issue 2

In this paper we study how to refresh a local copy of an autonomous data source to maintain the copy up-to-date. As the size of the data grows, it becomes more difficult to maintain the copy \ fresh, "making it crucial to synchronize the copy effectively. We define two freshness metrics, change models of the underlying data, and synchronization policies. We analytically study how effective the various policies are.

We also experimentally verify our analysis, based on data collected from ...

| <br><i>Most web pages are linked to others with related content. This idea, combined with another that says that text in, and possibly around, HTML anchors describe the pages to which they point, is the foundation for a usable World-Wide Web. In this paper, we examine to what extent these ideas hold by empirically testing whether topical locality mirrors spatial locality of pages on the Web. In particular, we find that the likelihood of linked pages having similar textual content to be ...</i> |   |     |

| <br>The Web is a rich source of information, but this information is scattered and hidden in the diversity of web pages. Search engines are windows to the web. However, the current search engines, designed to identify pages with specified phrases have very limited power. For example, they cannot search for phrases related in a particular way (e.g. books and their authors). In this paper we present a solution for identifying a set of inter-related information on the web using the                |   |     |

| <br>Volume 35 Issue 5<br>This paper presents a static race detection analysis for multithreaded Java programs. Our analysis is based on a formal type system that is capable of capturing many   |   |     |

common synchronization patterns. These patterns include classes with internal synchronization, classes that require client-side synchronization, and thread-local classes. Experience checking over 40,000 lines of Java code with the type system demonstrates that it is an effective approach for eliminating race conditions. On lar ...

**11** Constructing, organizing, and visualizing collections of topically related 87%

Web resources

Loren Terveen , Will Hill , Brian Amento

**ACM Transactions on Computer-Human Interaction (TOCHI)** March 1999

Volume 6 Issue 1

For many purposes, the Web page is too small a unit of interaction and analysis. Web sites are structured multimedia documents consisting of many pages, and users often are interested in obtaining and evaluating entire collections of topically related sites. Once such a collection is obtained, users face the challenge of exploring, comprehending and organizing the items. We report four innovations that address these user needs: (1) we replaced the Web page with the Web site

Brian Amento , Loren Terveen , Will Hill

**Proceedings of the 23rd annual international ACM SIGIR conference on Research and development in information retrieval** July 2000

For many topics, the World Wide Web contains hundreds or thousands of relevant documents of widely varying quality. Users face a daunting challenge in identifying a small subset of documents worthy of their attention.

Link analysis algorithms have received much interest recently, in large part for their potential to identify high quality items. We report here on an experimental evaluation of this potential.

We evaluated a number of link and content-based algorithms using a dat ...

Mei Kobayashi , Koichi Takeda

**ACM Computing Surveys (CSUR)** June 2000

Volume 32 Issue 2

In this paper we review studies of the growth of the Internet and technologies that are useful for information search and retrieval on the Web. We present data on the Internet from several different sources, e.g., current as well as projected number of

users, hosts, and Web sites. Although numerical figures vary, overall trends cited by the sources are consistent and point to exponential growth in the past and in the coming decade. Hence it is not surprising that about 85% of Internet user ...

Volume 28 Issue 2

The World Wide Web is rapidly emerging as an important medium for transacting commerce as well as for the dissemination of information related to a wide range of topics (e.g., business, government, recreation). According to most predictions, the majority of human information will be available on the Web in ten years. These huge amounts of data raise a grand challenge for the database community, namely, how to turn the Web into a more useful information utility. This is exactly the subject t ...

**Proceedings of the 1998 conference of the Centre for Advanced Studies on Collaborative research November 1998**

Data Mining is a young but flourishing field. Many algorithms and applications exist to mine different types of data and extract different types of knowledge. Mining multimedia data is, however, at an experimental stage. We have implemented a prototype for mining high-level multimedia information and knowledge from large multimedia databases. MultiMedia Miner has been designed based on our years of experience in the research and development of a relational data mining system, DBMiner, in the Inte ...
